## Software Testing Report

A software test should be performed before each deployment. Groups will evaluate another project based on the most recent project documentation (which should be available in the blogs/wiki) and the project's source code. Post a copy of your testing / evaluation report in your wiki.

Evaluators	
Evaluated Project/Group	

The project was deployed in:    ☐ client's device            Unit/Device Details: \_\_\_\_\_

☐ company website        URL: \_\_\_\_\_

☐ cloud platform            URL: \_\_\_\_\_

Software aspects / functionalities tested <sup>1</sup>	Test Cases / Procedure <sup>2</sup>	Expected Result	Pass / Fail	Remarks
A	A.1			
	A.2			
	A.3			
	A.4			
B	B.1			
	B.2			
C				
D				

<sup>1</sup>Software aspects / functionalities

- for a list of the project's use cases / functionalities, refer to the project's Report #2 Section 2.b.ii
- refer to Chapters 11, 19, and 20 of our textbook as a guide for other typical software aspects that should be tested. A useful checklist is given in Section 14.2.4.

<sup>2</sup>Test Procedure / Actual Test Cases Used

- use the project's Activity #9 Section 3 and Activity #10 Section 3.c as a guide. Use your best judgement for the appropriate test cases / procedure to use.
